Hassle-Free Integration

Use our easy-to-implement interface to get connected with your MOTOTRBO®
radios or GPRS tracking systems. You can make job creation, dispatching or
asset monitoring fully managed by your existing system with no need to purchase
additional desk-top applications and hardware or servers to maintain.
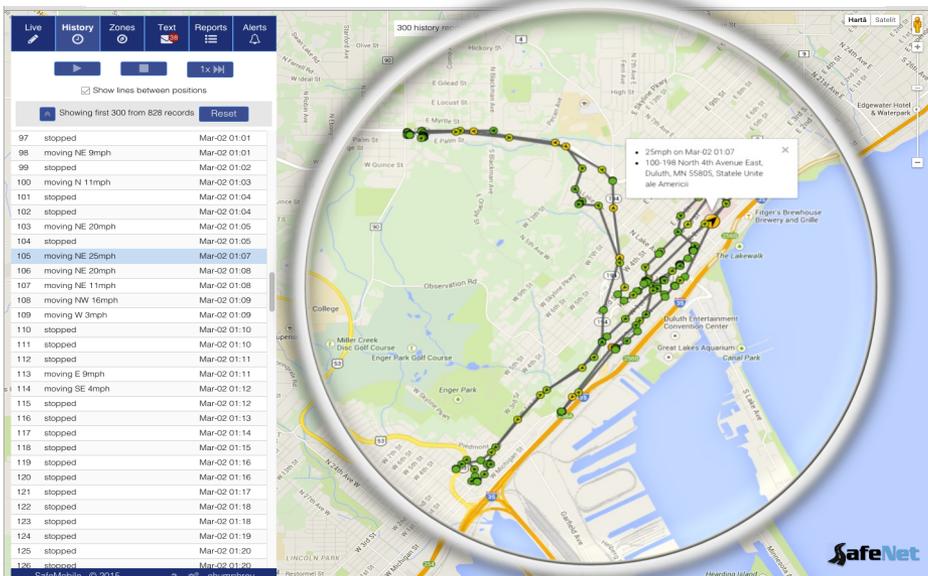

Tracking and Monitoring

SafeNet™ provides access to the real-time information you need to make critical decisions. Your data is collected and stored on a secure server and is available anytime, from any internet connected computer or tablet. Fleet Managers can now manage and monitor their mobile assets and personnel from anywhere in the world!
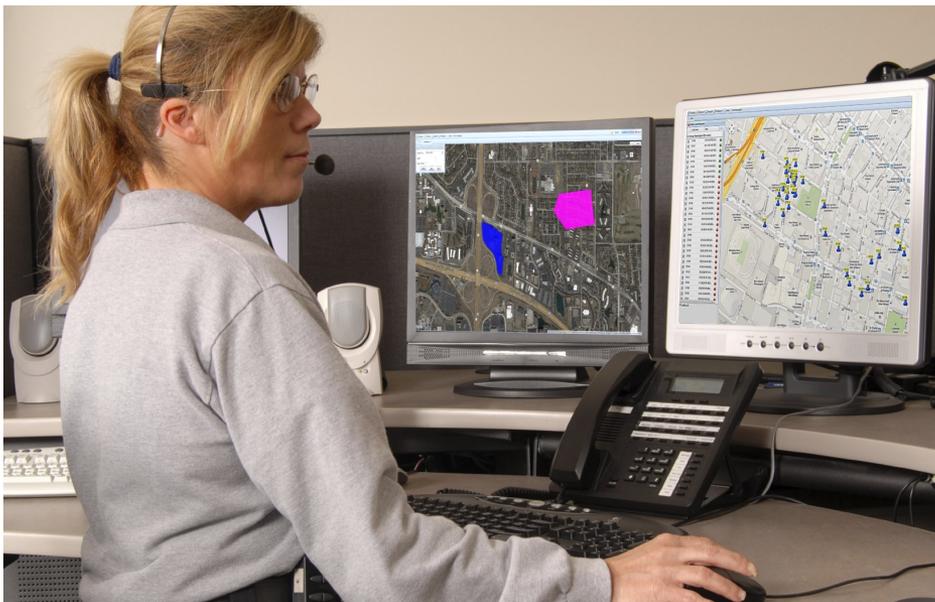

Navigation

A live, worldwide Google mapping interface provides real-time GPS status for all units including speed and heading. Zones and perimeters can be set to alarm when entered and exited. Unit histories are recorded and can be played back with street view.

Dispatching

A fast and robust messaging engine allows you send and receive messages at a glance, right from the map display to one unit, a group or all units at once. Display all incoming and send instant messages to the field for unit status, work details, routes, delays, customer requests and alarms.
